

VIS

Voice Input Station

Taking Digital Dictation Technologies to a New Tier

In this age of advancing communication technologies VIS, the *Voice Input Station*, takes digital dictation giant steps forward to a whole new arena of performance.

Designed and engineered for today's workplace environment, the full-featured VIS digital dictation station is a desktop communications control center that fits neatly on any desk or work area in a very small footprint.

VIS gives you the power to speak your word and deliver it to your PC and numerous other locations in just seconds, rather than minutes, thus increasing your productivity and efficiency tenfold.

In offices and medical facilities throughout the country, the VIS *Voice Input Station* is changing the anatomy of information exchange. For recording and playing of dictation, quick notes, reports, conferences, discussions, telephone conversations and more – including laser technology for barcode scanning – the VIS *Voice Input Station* steps forward as digital voice documentation at its finest.

get a grip...

The full-featured VIS *Voice Input Station* performs digital voice messaging and barcode scanning with comfort, ease and advanced technologies unmatched by others.

But, there's so much more!

The moment you pick up the handset of the VIS *Voice Input Station* you'll appreciate the feel and comfort of it in the palm of your hand. That's because both the VIS 200 and 220S handsets are designed so that you can easily get your hand around them...any size hand. There's no fumbling, no awkward finger or wrist gyrations - it's all so easy and within your grasp.

Partnering with the VIS handsets, the multi-featured base module of the VIS *Voice Input Station* serves as a mini control center, connected to your PC, bridging your handset to limitless potential, based on application software created for your particular needs. This smart base module, with its 8 programmable button keypad, lets you enter ID numbers, initiate telephone record capability, or route dictation to pre-designated people or locations within an office complex, throughout a medical center, inside an industrial facility or to remote sites, anywhere... all with the simple touch of a button.

Simple in design.

on the future of digital dictation

- **External speakers/headset output** - for group or private listening.
- **External microphone/telephone record input** - for "hands free" microphone.
- **Base module/handset speaker switch** - lets you listen through the base module or handset.
- **Volume control** - lets you adjust to your comfort level.
- **External microphone/telephone recording button with LED** - lets you activate external telephone recording.
- **Multi-functional keypad** - gives you limitless versatility based on your software application.
- **PC Connections** - for an easy quick connect to your computer.
- **Foot control connection** - lets you dictate "hands-free".
- **Handset cradle** - a sensible place to put your handset.
- **Loudspeaker** - for listening to dictation through the base module.
- **Handset connection** - for a "quick connect" or "disconnect" of your VIS handset.

- **Speaker** - lets you discreetly review dictated messages.
- **End of letter/Priority button** - signals completion of dictated letters or flags letter as high priority.
- **Fast forward button** - lets you advance at quick speed.
- **Barcode scanner trigger** - simply point and squeeze for laser barcode readings. (model VIS 220S)
- **Barcode scanner** - lets you quickly scan alpha/numeric barcodes in a split second. (model VIS 220S)
- **Microphone** - with AGC for constant voice level during recording.
- **Record LED** - when it's red you're recording.
- **Insert/Overwrite button** - lets you seamlessly insert additions or overwrite with changes.
- **Record/Stop/Listen/Rewind switch** - the proven efficient, one finger slide control.

- **Coiled cord** - with 8 feet of flexibility.

smart in performance - the VIS Voice Input Station sets the pace!

scan the codes...

With all the same great features of the VIS 200 handset, the VIS 220S adds an integrated laser scanner that lets you quickly and precisely retrieve bar-coded patient information from departmental records or client histories from files with a squeeze of the laser trigger located conveniently beneath the laser window on the backside of the handset. This design feature eliminates the need for having to angle your wrist or reposition the handset while scanning barcodes. Simply hold the handset as you would for dictation then *point and squeeze* for swift and accurate readings. Once you've downloaded barcode data, just add your dictation and send it on to your pre-designated locations.

The VIS *Voice Input Station* is compatible with numerous existing transcription software programs as well as with software configured specifically for unique dictation/transcription requirements.

To further enhance transcription performance, the VIS interfaces with the latest in digital transcription products including the FLX-10 digital headphone, the FlexiPort headphone connector, and the Infinity Foot Control. Together, these products add a new dimension to responsive digital transcription efficiencies.

- **Available Digital Dictation and Transcription software**
Software created specifically for your individual requirements.
- **FLX-10 Digital Headphone**
Volume control level and monaural/stereo switch for increased clarity. Ergonomically designed dome-shaped sound chambers for total comfort.
- **FlexiPort Headphone Connector**
Plugs directly into the back of your computer. Attaches to desk or computer station for a quick connect from headphones to PC.
- **Infinity Foot Control**
Large footprint, no foot fatigue - can't be shuffled from normal foot movement. Ensures endless hours of trouble-free performance for transcriber.
